CONNECTING FOR GOOD
2017 ANNUAL REPORT

CONNECTING FOR GOOD

CONNECTION FOR GOOD
A COMMUNITY WIRED FOR GOOD

Dear Friends of Connecting For Good -

If you’re like me and 84% of Americans, you regularly use the Internet - no dial-up involved like in the early days of connectivity. People are more connected than ever before.

While most consumers have thrived in our digital world, many are still challenged by little to no connectivity, and limited opportunity due to lack of skills and training.

Thankfully, our community’s generous support and advocacy in 2017 inspired tremendous growth at Connecting For Good. With our focus on digital skills training, investments in new staff, strategic initiatives and collaborative partnerships, we’re wired for even more good in 2018.

Together, we’re ensuring our most vulnerable residents are acquiring skills to prepare for the workforce, to secure better jobs, to strengthen family stability, and to plan for a brighter future.

In the year ahead, we pledge to achieve greater balance, diversity and growth with our individual supporters as well as government and private sector partners. We also have a keen eye on measuring outcomes, expanding awareness, and boosting our community impact.

Thank you for your confidence and support as we build a community of digital equity and inclusion - a community wired for good!

With gratitude,

TOM ESSELMAN
Chief Executive Officer

ConnectingForGood.org

Our Mission
Connecting For Good provides computer skills, computers, and internet access to low and moderate income communities.

Our Vision
A connected future for all.

Through Digital Literacy Training, low-cost computers and Internet access, low income residents will achieve measurable and sustainable gains in Education, Employment, Economic Impact, and the Environment.

Here we grow @ Juniper Gardens

How access, connectivity and collaboration in one of our community's most challenged neighborhoods brings STEM education to life!

Though situated in one of the area's largest concentrations of poverty, the Connecting KC Kids program at Juniper Gardens is blossoming with potential.

A recent after-school activity found 17 students designing and building catapults out of everyday materials. On this day, simple wooden craft sticks, plastic eggs and rubber bands are components of a test which prompts students to ask questions, define problems, carry out investigations and design solutions.

Lessons in science and engineering are part of a fun competition to see whose object is projected the furthest.

More than a haven from the uncertainly that exists beyond the lab walls, the Connecting For Good site at Juniper Gardens in Northeast Kansas City is a safe and vibrant place where critical thinking and collaborative problem solving are changing the educational landscape.

"We're engaging the academic and social interests of kids through innovative activities that promote higher-order thinking," said program coordinator Amber Bryant. "It's exciting to see young minds at work, not only in STEM learning but in a spirit of teamwork," she said.
